

PORTFOLIO

About ME

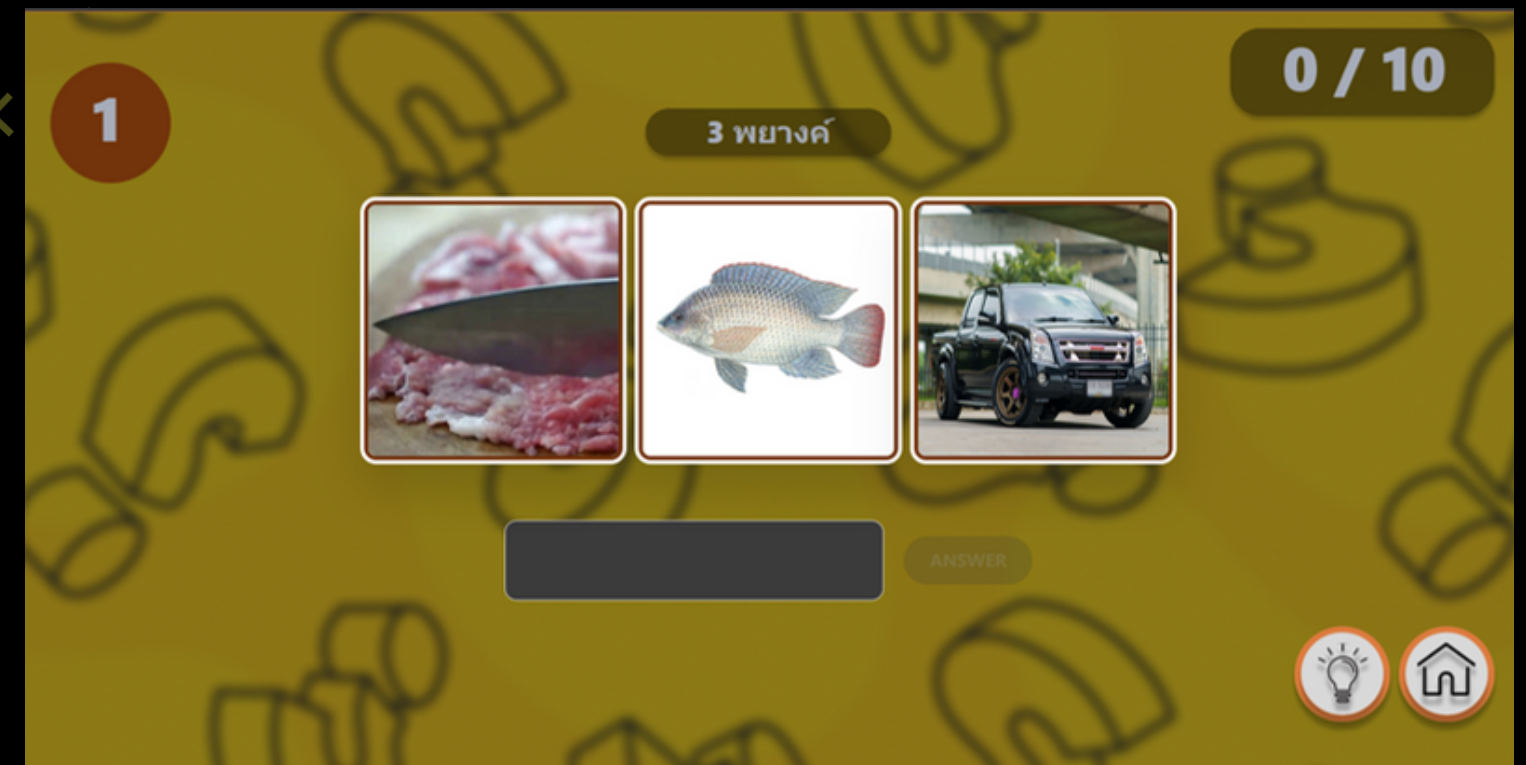

"My name is Jakapt or you can call me Jak for short. I'm 20 years old, and I'm really into computers. This passion has led me to want to work in this field. At first, I didn't know anything about coding, but after three years of working on various projects, my skills have improved, though they're not perfect yet. However, I've found that I have a strong interest and have made significant progress in UX-UI design, which makes me want to pursue a career in this field seriously."

Guess What ??

"I started a project related to a word guessing game using Vue.js as the main framework. Later on, I further developed it by adding a JSON Server and implementing CRUD operations, turning it into a game called 'Guess What'."

Announcement System

""It's about combining various knowledge areas such as SQL, frontend, backend, and DevOps to create this project."

Wrist Care

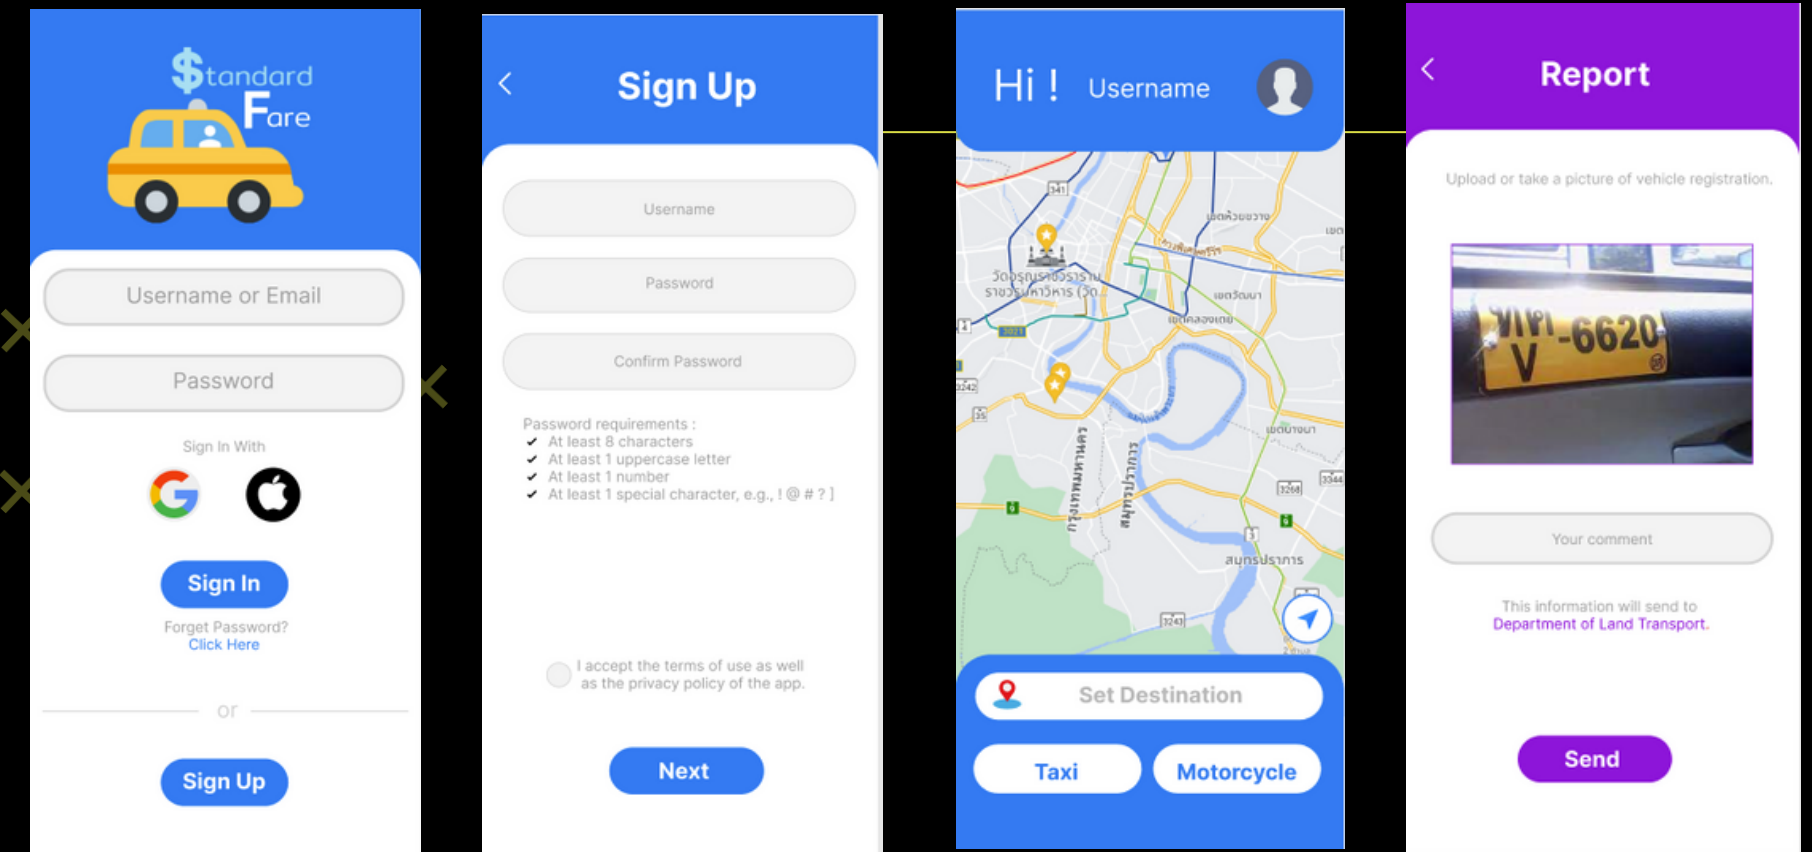

"Designing an application using Figma, the app I have designed is a wrist care app aimed at reducing wrist pain."

Standard Fare

Designing an application using the Figma program, the app I have designed is called "Standard Fare." It is an app designed to help users reduce their transportation costs. In this project, we have collected and addressed common issues that people often encounter when it comes to transportation expenses, and we have developed and designed this application accordingly.
